

METHANYL YELLOW TEST KIT

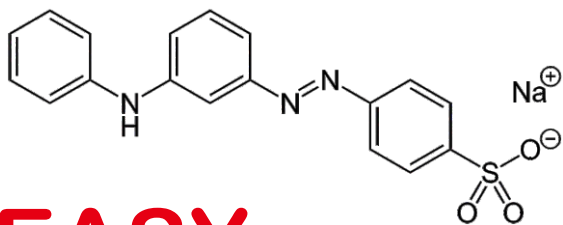

Methyl yellow is a yellow dye for textile, paper, soap and other industries. But in practice, in some developing country these dyes are often misused to color different types of food, among others, noodles, tofu, and yellow snacks. Methyl yellow is irritant so if swallowed can cause irritation of the gastrointestinal tract. The chronic effects of long-term use of methyl yellow on health are liver function, bladder and cancer disorders. Methyl Yellow is a food additives that is prohibited in food use according to Minister of Health Regulation.
